

## **BRIDGE TO SERVE (BTS)**

### **Problem Statement:**

Orphanages and charities struggle to meet needs due to food insecurity and lack of essential resources. Surplus resources often go to waste, limiting their ability to help.

### **Solution:**

-Bridge to Serve operates as a communication platform connecting surplus resources directly from donors to recipients in need. Donors list surplus items they have, and recipients request needed items. Donors then send items directly to recipients through the app, bypassing intermediaries and reducing waste.

### **Aligned with SDG goals:**

Bridge to Serve supports SDG goals like Zero Hunger, Quality Education, Sustainable Cities and Communities, and Responsible Consumption and Production.

### **Abstract:**

Bridge to Serve (BTS) is a communication platform connecting surplus resources directly from donors to recipients in need. Donors list surplus food, clothing, old books, unused household items, old toys, and other resources, which recipients can request. Recipients provide their communication details for donors to send items directly. By addressing critical issues like food and clothing shortages, We promotes sustainable resource management while fostering compassion, solidarity, and collective responsibility.
